

Project 5: Home Cyber Security Checklist

1. Objective

Assess the basic security of a home computer or laptop and recommend improvements based on cybersecurity best practices.

2. Methodology

Tools used:

- Windows Security / macOS System Preferences
- Browser Settings
- Router Configuration Page

3. Security Checklist

No.	Security Item	Status (Enabled / Not Enabled / N/A)	Notes
1	Antivirus installed and updated	Enabled	Windows Defender or third-party AV active
2	Firewall enabled	Enabled	Windows Firewall ON
3	Automatic Updates enabled	Enabled	Windows Update set to automatic
4	Strong password used	Enabled	Complex password with letters, numbers, symbols
5	Screen Lock enabled	Enabled	Auto-lock after 5 minutes of inactivity
6	Backups configured	Not Enabled	No scheduled backup found
7	Multi-Factor Authentication (MFA) enabled	Enabled	MFA active on email and banking accounts
8	Browser up to date	Enabled	Chrome auto-updates enabled

No.	Security Item	Status (Enabled / Not Enabled / N/A)	Notes
9	Wi-Fi password strong	Enabled	WPA2/WPA3 with complex passphrase
10	Device encryption enabled	N/A	Not supported on this hardware

4. Observations

Summarize what you found during the assessment. Example:

- Antivirus is active and updated automatically.
- Firewall is enabled and blocking unauthorized connections.
- Backups are not configured.
- MFA is enabled for email but not for social media accounts.

5. Recommendations

Write at least five actionable improvements.

1. Enable automatic backups using OneDrive or external drive.
2. Turn on device encryption (BitLocker/FileVault).
3. Use a password manager for stronger, unique passwords.
4. Extend MFA to all critical accounts.
5. Update router firmware and use WPA3 encryption.
6. Review browser privacy settings regularly.

6. Conclusion

Summarize the overall security posture of the device and network. Example:

The system demonstrates moderate security readiness. Core protections like antivirus, firewall, and MFA are active, but backup and encryption need improvement. Implementing the recommended measures will enhance resilience against common cyber threats.
